ABSTRACT

The study aimed is to develop a Get a Trike Mobile Application to make traveling easier and safer for passengers. The study sought to evaluate the software quality using ISO/IEC 25010 in terms of functional suitability, performance efficiency, compatibility, usability, reliability, security, maintainability and portability. The assessment of the respondents on the level of acceptability of was determined in terms of functionality and performance. The study also tested the significant difference between the faculty and students on the software quality evaluation and level of acceptability. More than half of the respondents were passengers. The operators' evaluation on the software quality in terms of functional suitability, performance efficiency, compatibility, reliability, maintainability and portability was Excellent. On the other hand, the operators' evaluation on the software quality in terms of the usability and security was Very Good. The passengers' evaluation on the software quality functional suitability, performance efficiency, compatibility, reliability, maintainability and portability was Excellent. The operators and passengers' evaluation on the level of acceptability in terms of functionality and performance was Very Acceptable. There was a significant difference on the evaluation of the faculty and students on the software quality of Get a Trike Mobile Application in terms of usability and security. There was no significant difference on the level of acceptability on the assessment of the Faculty and Students of Get a Trike
